DE-38 is our moderate parking-system with an interactive control. The option of a double platform provides a very efficient installation and space use without pillars in between.

**EASY TO PLAN** by a space saving construction.

**EASY TO INSTALL** by a minimized parts construction.

**EASY TO USE** by a barrier free construction.
1. WIDTH OF PARKING SPACE / SYSTEM (IN CM)

A = system width 1*
B = usable parking space width

<table>
<thead>
<tr>
<th>Single</th>
<th>Double</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>B</td>
</tr>
<tr>
<td>260</td>
<td>230</td>
</tr>
<tr>
<td>270</td>
<td>240</td>
</tr>
<tr>
<td>280</td>
<td>250</td>
</tr>
</tbody>
</table>

1* Tolerance of dimensions on the construction site = 0 to + 3 cm. Other system widths are available on request.

2. DIMENSIONS (IN CM)

D = pit depth 2*
H = clear height
C1/C2 = vehicle height bottom / top 3*

<table>
<thead>
<tr>
<th>D</th>
<th>C1</th>
<th>H</th>
<th>C2</th>
</tr>
</thead>
<tbody>
<tr>
<td>170</td>
<td>150</td>
<td>320</td>
<td>150</td>
</tr>
<tr>
<td>185</td>
<td>165</td>
<td>335</td>
<td>150</td>
</tr>
<tr>
<td>200</td>
<td>185</td>
<td>350</td>
<td>150</td>
</tr>
</tbody>
</table>

2* Other / larger pit depths are available on request.

3* The vehicle height with roof rails, antenna and other height increases must not exceed the listed max. vehicle heights.

3. TECHNICAL DATA

Maximum vehicle weight
- 2000kg / 500kg wheel load
- 2600kg / 650kg wheel load

Height
In case of larger ceiling height, higher vehicles can be parked on the top platform accordingly.

Pit length
A pit length of 530 cm is necessary for a 500 cm car, but 540 cm are recommended. This enables larger safety distances, if newer, longer vehicles are purchased.

Dimensions
- All dimensions are minimum finished dimensions in cm.
- Allow for tolerances to VOB Part C (DIN 18330, 18331) and additionally DIN 18202 (+ 30 mm / 0 mm).
- In case of partition walls, 15 x 15 cm opening for electrical cables and hydraulic pipes, do not close off opening after installation.
4. ACCESS CONDITIONS

**Maximum gradient / rise**
- Max. 3% gradient
- Max. 10% rise

**Drainage**
- 1-2% gradient on the pit floor

4' In case of higher values, safe access of the vehicle cannot be guaranteed by DE-PARK.

5. ACTIONS ON THE STRUCTURE

<table>

<td>30 kN</td>
</tr>
<tr>
<td>F3</td>
<td>1 kN</td>
<td>1 kN</td>
</tr>
</tbody>
</table>

- The forces apply to one pillar.
- If pillars are next to each other the figures double, as both pillars are fixed in one point.

6. ANCHORING

- Systems are anchored into the floor. The hole depth is approximately 13 cm.
- The quality of the concrete in the structure (for the parking system) must be at least C20/25.
- The precise position of the load application points depends on the selected system. For precise values, please contact DE-PARK.

7. TYPE OF CONTROL

**Interactive control unit:**
We replaced the dead man’s control function from the turning key for additional comfort, security and functionality.

- Our system is providing additional comfort by a set of two interactive push buttons.
- The push buttons are illuminated so that the control unit can provide information on the system status.
- This new system allows the integration of many custom safety solutions.
8. ELECTRIC SERVICES

Connected load of unit: 3 kW / 400 V

Electrical requirements on site: see figure

</table>

Services provided in the system: see figure above
- Operator terminal including operator presence control with raising lowering
- Emergency stop outside of the system’s movement range

9. SYSTEM-RELATED REQUIREMENTS

Maintenance, cleaning & prevention
• The systems must be serviced and cleaned regularly. This applies above all if the systems and the platforms are exposed to aggressive substances such as salt, water, dirt, operating supplies, sand, etc.
• Adequate drainage must be ensured.

Ventilation
The garage must be adequately ventilated.

10. LEGAL REQUIREMENTS

Marking tape on the edge of the pit
According to EN 14010 / ISO 3864, a 10cm wide, black & yellow warning marking must be attached to the edge of the pit.

Separating elements / Barriers
According to EN ISO 13857, separating elements or barriers must be installed in the pedestrian area / accessible areas around the parking system, including during installation.

Fire safety
The garage design must fulfill the regional fire safety provisions. The requirements can vary. Therefore the situation must be clarified and information obtained in advance by the customer and then agreed and coordinated.

Noise emissions
According to the noise insulation regulations for buildings to DIN 4109, a value of 30dB (A) must be complied with in occupied rooms and spaces. You receive a sound insulation package with the system for the required 30dB (A) insulation of the structure is also necessary. Sound reduction index min. Rw = 57dB

11. REQUIREMENTS ON SITE

Ambient conditions
Temperature range from -5 to +40 °C. Relative humidity 50% at max. outdoor temperature +40 °C. Please contact DE-PARK if different conditions.

Lighting
The parking spaces must be adequately illuminated on site as specified.

12. CE AND CONFORMITY

The systems conform to ...
• EN 14010-2009-12 Safety of Machinery - Equipment for power driven parking of motor vehicles
• Machinery Directive 2006/42/EC

Design changes
We reserve the right to continuously develop our product on the basis of technical progress and to make changes and/or modifications to parts, assemblies or overall, to processes and to standards.

DE-PARK IS MAKING YOUR LIFE EASY:

GERMAN MADE WITH A SLIM & MODULAR DESIGN
EASY PLANNING AND SETUP

LOW MAINTENANCE CONSTRUCTION
EASY TO USE WITH LOW NOISE EMISSIONS

NO PILLARS IN THE ENTRY AND PEDESTRIAN AREA
EASY MANOEUVERING AND SENSORLESS POSITIONING

FLAT & CONTINUOUS PLATFORM
EASY TO CLEAN AND COMFORTABLE TO WALK ON
